NETWORK MATURITY

737-8 MAX

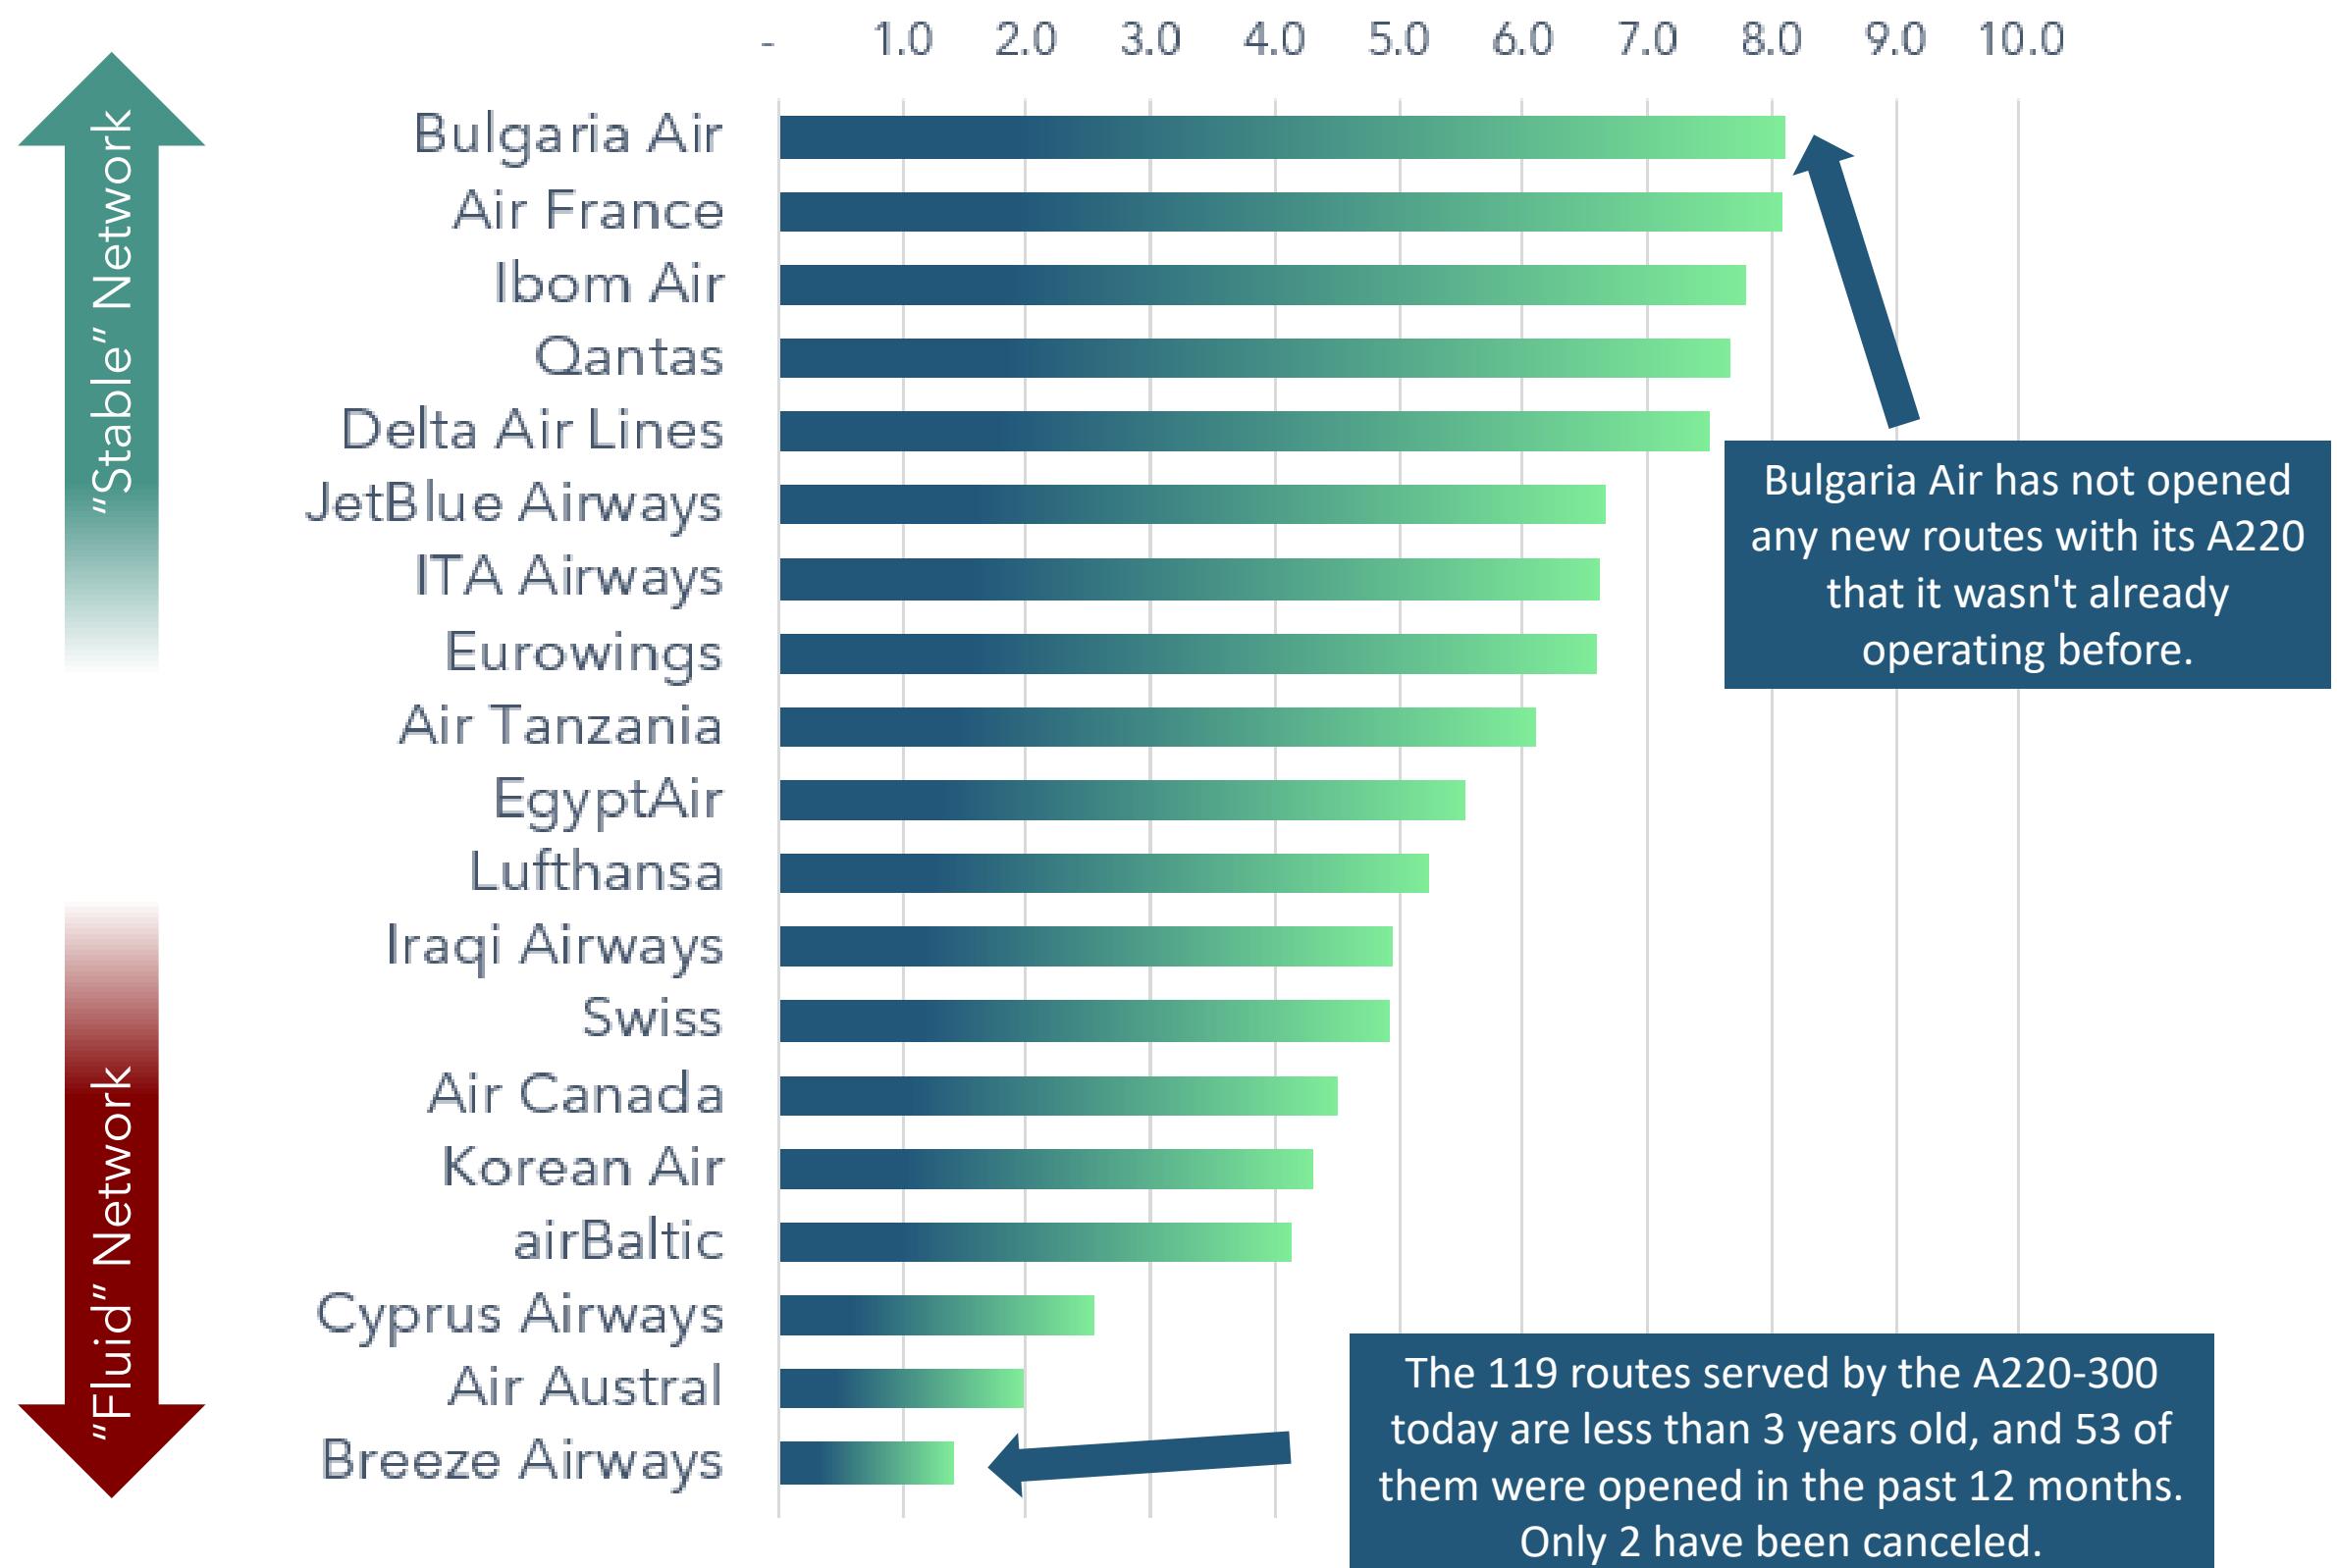

"Stable" Network: a mature network, with the majority of routes opened for more than 3 years.

"Fluid" Network: a young and dynamic network, with a high proportion of routes opened within the last 3 years, or even within the past 12 months.

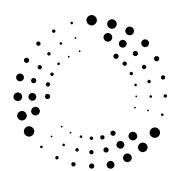

NETWORK MATURITY

A220-300

"Stable" Network: a mature network, with the majority of routes opened for more than 3 years.

"Fluid" Network: a young and dynamic network, with a high proportion of routes opened within the last 3 years, or even within the past 12 months.

Network Maturity

Airline networks are analyzed to categorize routes into the following groups: routes canceled in the past 12 months, routes launched within the last 12 months, routes opened less than 3 years ago, and routes that have been operational for more than 3 years. For a route to be classified as new or canceled, it must not be operated by any other aircraft type in the fleet. A mathematical function then converts this classification into a score ranging from 0 to 10, based on benchmark data from over 1,500 airline/aircraft combinations worldwide.

A score of 5 signifies an average level of network maturity, while a higher score indicates a more mature and stable network.

AvBench

*Understand why and how each aircraft contributes
to the operational and commercial success of an airline*

30+ commercial and operational metrics
to explain ahead of time the airline's financial performance
and the role of each asset.
